

## TerraMaster Launches BBS Integrated Backup Solution Comprehensive Protection for Enterprise Data Security

### [Multimedia](#)

Amid the growing number of global data security incidents, the importance of enterprise data protection has become increasingly prominent. To address this challenge, TerraMaster, a professional brand focusing on providing innovative storage products for families and businesses, officially launched its BBS integrated backup solution, offering comprehensive data backup solutions for small and medium-sized enterprises.

This integrated backup solution combines a professional storage management system, a suite of backup software tools, and a hardware platform, achieving stop enterprise data backup service.

The core components of the BBS suite include Centralized Backup, TerraSync, Duple Backup, CloudSync, and Snapshot. Together, these components provide comprehensive disaster recovery solutions, and Snapshot is used to defend against ransomware attacks.

### BBS Key Features

#### Flexible Combination and Full-Scenario Deployment

The advantages of TerraMaster's integrated backup solution lie in its flexible combination and full-scenario deployment capabilities. It allows for free combination based on different application scenarios and company sizes, enabling the implementation of various backup strategies.

For companies of different sizes, TerraMaster provides tailored solutions. Companies with fewer than 50 employees can use Centralized Backup or TerraSync. Companies with 50-100 employees can synchronize branch office data to the central server at headquarters using TerraSync and continuously back up the data to remote TNAS servers. Companies with 100-200 employees can use Centralized Backup to back up PCs, servers, and virtual machines to the TNAS central server, with backups to a remote TNAS server as well.

The upcoming release of the next-generation TOS 6 system, integrated with the BBS full-scenario backup solution, is specifically designed for small and medium-sized enterprises, delivering an unprecedented upgrade experience. This operating system features a brand-new user interaction model, offering a complete transformation from the inside out! Moreover, TOS 6 enhances security protection mechanisms by introducing a multi-layered security architecture to maintain operating system stability for a broad range of users.

The launch of TerraMaster BBS integrated backup suite, paired with the new TOS 6 system,

undoubtedly provides enterprises with a more comprehensive and efficient data protection solution in the digital and information era. Whether considering data security or business continuity, the BBS integrated backup solution is the best choice for enterprises.
